C2A FEATURE

SMARTPHONE ACCESS CONTROL AT THE CLICK OF A BUTTON

MiMOR's Click or call to access (C2A) feature allows you to safely and securely manage, monitor and log access to your building using your phone.

THE C2A FEATURE CAN BE USED FOR:

- Key safes
- Front doors
- Apartment front doors
- Garage doors
- Rear entrance and exit doors
- Common areas doors that require booking to simplify access for both trades and residents.
(E.g. Conference room, theatre room, kitchenette, tennis court, BBQ area, roof top area, sports bar)

MiMOR's C2A feature removes the need for fobs, swipes, keys and garage door remotes. It is the most efficient way to allow residents, trades, managers and guests access into the building and required areas.

A real time log of attempted access and users makes it the safest way to control access. All features are managed through the MiMOR dashboard at the click of a button.

Minimise the need for key safes being stored at the front of buildings that are often broken in to. Save time, reduce your risk and claim control of your property.

RESIDENTS

Residents will be able to open the front door and garage door to the building on their MiMOR dashboard. Once authorised by an owner/tenant, access to these features can be granted with one button from the managers side at the time the residents move in.

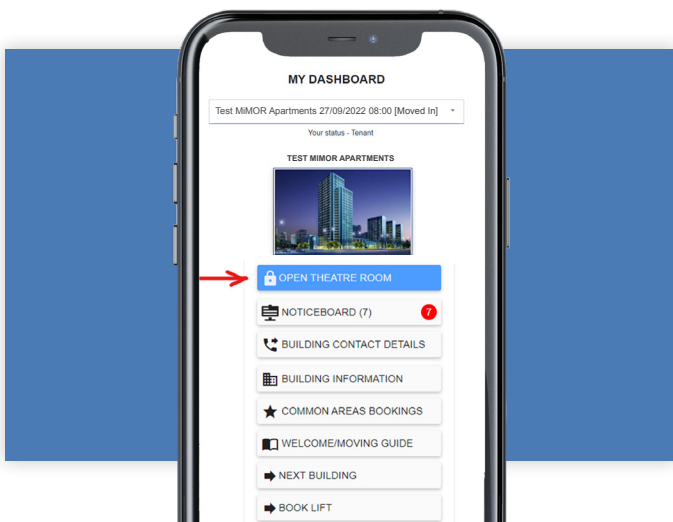

A SIMPLIFIED SYSTEM FOR TRADES

A digital key safe that logs which trade opened the digital key safe and who had the keys last. The C2A Feature allows trades access into the building via the front entrance doors, allowing digital key safes to be stored safely inside the building.

SHORT STAYS

Owners have the choice, especially for short stays, to add the C2A Feature to their apartment door to control who has access. With bookings through a third party site (e.g. bookings.com, Air bnb etc), owners will be able to grant access to doors and common areas needed, and control the dates and times to co-inside with the booking that person made. Owners can authorise access to multiple guests if necessary. Everything is controlled from the MiMOR dashboard.

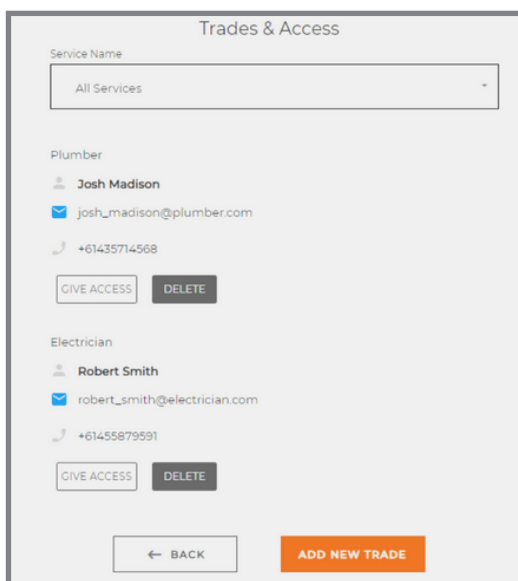

ACCESS TO COMMON AREAS

The C2A system is being used for common areas such as conference rooms, theatre rooms, tennis courts, gyms, BBQ areas etc. Residents can book an area via the MiMOR system and their MiMOR dashboard will allow them to open the common area door with the a click of a button and only during the time of their booking.

TRADES AND RESIDENTS WILL BE PROVIDED ACCESS TO THE REQUIRED AREA BY THE MANAGER BY FOLLOWING THE BELOW STEPS:

1. The Trade/residents will receive an SMS and/or email with instructions of how to enter for the first time.
2. They will either follow the link in the SMS or gain access through their trades dashboard on the MiMOR platform with a single click.
3. The doors, common area, or digital key safe will open for access and a log of who has entered will be kept.

"The web portal is very easy and intuitive to use. As a property manager, I have peace of mind knowing who is authorised to access the key safe and I have all of their contact details. Adding or removing access for someone can be done in minutes. It certainly saves a lot of time by removing the need to traveling to sites to change PIN codes."

Keep track of trades to your buildings with this sophisticated, safe and convenient C2A.
